October 17, 2016

Honorable Harold Rogers Chairman Committee on Appropriations H-305 The Capitol Washington, DC 20515 Honorable Nita Lowey Ranking Member Committee on Appropriations 1016 Longworth H.O.B. Washington, DC 20515

Dear Chairman Rogers and Ranking Member Lowey:

As you consider final Fiscal Year 2017 appropriations bills, the multi-sector, nonpartisan Census Project coalition¹ urges you to increase funding for the **U.S. Census Bureau** above the levels in the House and Senate Commerce, Justice, and Science bills. As the Statement of Administration Policy (June 14, 2016) indicated, funding below the President's \$1.634 billion budget request will jeopardize implementation of a modern, cost-effective, and accurate **2020 Census**, and preservation of a robust **American Community Survey (ACS)** that guides prudent decision-making and resource allocation.

The Census Project

Failure to provide a funding level for decennial census planning that is closer to the President's request could cost taxpayers billions of dollars, as the Census Bureau is forced to fall back on more costly but "tried and true" counting methods. Alternatively, the Bureau would have to forge ahead with sweeping operational reforms that have not been fully tested. Also at risk are activities such as the communications campaign and partnership program, designed to reach historically hard-to-count population groups, including rural residents, immigrants, people of color, and young children. The Census Bureau cannot meet the congressional goal of keeping 2020 Census costs at the 2010 Census level while maintaining accuracy, without sufficient investment in final testing, operational and IT development, and timely field preparations.

In FY2017, the Census Bureau must make final design decisions in advance of the 2018 End-to-End Census Test, when all systems and operations are integrated in a census-like environment. It must acquire space and build infrastructure for six Regional Census Centers, and begin a congressionally required program to update address and spatial data in partnership with state and local governments. Other critical 2020 Census activities in FY2017 include:

• expanded work to update the master address list and spatial (mapping) information using new, cost-effective methods;

A project of the Communications Consortium Media Center 1300 I Street NW, Suite 400E, Washington, DC 20005 202.326.8700 www.TheCensusProject.org

¹ The Census Project (<u>www.thecensusproject.org</u>) is a long-standing coalition of diverse census stakeholders that includes state and local governments, business and industry, civil rights and labor groups, housing and child advocates, and research and professional organizations that support an accurate and comprehensive census and ACS.

- o build-out of all IT systems in time for the End-to-End Test;
- the 2017 Census Test, which will assess reengineered Update/Enumerate methods for rural and remote areas (including American Indian lands) for the first time;
- the 2017 Puerto Rico Census Test the first field test of operations in the Commonwealth;
- o submission of 2020 Census and ACS topics to Congress, as required by law;
- further refinement and final decisions on 2020 Census question wording, including a revised question on race and ethnicity; and
- development of the Integrated Communications Campaign and Partnership Program, with a focus on market segmentation and overall planning.

The Census Bureau cannot implement these activities in a thorough and timely way without sufficient funding in FY2017. Equally important, it cannot reclaim lost time and compensate for reduced scope of final tests and early preparations at this point in the cycle. The Bureau also could be forced to scale back other vital programs, most notably the ACS and 2017 Economic Census, as it tries to maintain a reasonable glide path to the 2020 Census with inadequate funding. For the ACS, funding shortfalls could lead to reduced sample size or curtailed follow-up activities, which would diminish the reliability or even availability of data for less populous areas (such as rural communities) and small population groups, such as persons with disabilities and veterans.

The Census Bureau continues to identify insufficient funding as the greatest risk it faces in the short time remaining until the 2020 Census. It must establish full confidence in new methods and operations before deployment in the census. It must develop a flexible, targeted communications campaign to reach an increasingly diverse population, in order to meet the U.S. Constitution's mandate for an accurate count of *all* residents every ten years.

In closing, we urge Congress to fund the Census Bureau as close to the President's budget request of \$1.634 billion as possible, including \$778 million for the 2020 Census and \$251 million for the American Community Survey, in the final FY2017 CJS Appropriations bill. Please feel free to contact Census Project Co-Director Mary Jo Hoeksema (maryjo@popassoc.org) if you have any questions.
