

FY 2022 APPROPRIATIONS REQUESTS for SOCIAL & BEHAVIORAL SCIENCE RESEARCH

COSSA joins with organizations across the science, research, and data community in requesting robust funding in FY 2022 for the many agencies that support research and produce data critical to the social and behavioral sciences. Their vital contributions to the social science enterprise make our population healthier, our democracy fairer, our nation safer, and our economy stronger.

Commerce, Justice, Science & Related Agencies Appropriations Bill, FY 2022

National Science Foundation \$10.2 billion

NSF is the only U.S. federal agency tasked with *supporting scientific research across all fields of science*. The agency's "portfolio" approach to the research it supports recognizes that not every project will—or is expected to—yield a positive result, but that taken together, a diverse portfolio of research can collectively advance science. **NSF serves as the largest single funder of basic social and behavioral science research in the United States.**

Census Bureau \$2 billion

Social scientists across the country rely on the Census Bureau for accurate, timely, objective, and relevant data to better understand the U.S. population and to produce findings that help us shape policies that better serve the American people. With the 2020 Census behind us, the Census Bureau has an opportunity to modernize its operations to meet the challenges of 21st century data collection. With sufficient Congressional support, the Census Bureau can transform its data collection and processing systems, expand its data storage and analysis capabilities, continue its work to improve linking data from administrative records and big data sources, and ensure that the Bureau continues to set the standard in data security and privacy protection.

National Institute of Justice \$41 million

NIJ serves as the research arm of the Department of Justice, filling an important role in helping the agency to understand and implement science-based strategies for crime prevention and control. It supports rigorous social science research that can be disseminated to criminal justice professionals to keep communities safe.

Bureau of Justice Statistics \$50 million

BJS is the nation's primary source of crime and justice data, producing statistical evidence needed by researchers and criminal justice policy decision makers. By working with jurisdictions at all levels to compile data, BJS provides key insights that improve public safety.

Labor, Health and Human Services, Education & Related Agencies Appropriations Bill, FY 2022

National Institutes of Health

\$46.1 billion

NIH supports basic and applied social and behavioral science research across its 27 institutes and centers in recognition of the value these disciplines add to preventing and treating most diseases, disorders, and conditions. Understanding behavioral influences on health is needed to battle the leading causes of morbidity and mortality, namely obesity, heart disease, cancer, AIDS, diabetes, age-related illnesses, accidents, substance abuse, and mental illness.

National Center for Health Statistics

\$200 million

Housed within the CDC, NCHS collects critical data on all aspects of our health care system through data cooperatives and surveys that serve as the gold standard for data collection around the world.

Agency for Healthcare Research and Quality

\$500 million

AHRQ is the only agency in the federal government with the expertise and explicit mission to fund research on improving health care at the provider level (i.e., in hospitals, medical practices, nursing homes, and other medical facilities). Its work improves the quality, safety, efficiency, and effectiveness of America's health care system and provides a necessary complement to the work of other basic health research agencies.

Bureau of Labor Statistics

\$800 million

BLS produces economic data that are essential for evidence-based decision-making by businesses and financial markets, federal and local officials, and households faced with spending and career choices.

Institute of Education Sciences

\$700 million

IES provides the nation with important statistics, research, and evaluation that improve education policy and practice and allows us to understand trends in student populations, as well as in schools and universities.

Centers for Disease Control and Prevention

\$10 billion

CDC relies on insights from the social and behavioral sciences to understand the effects of behavioral, social, and cultural factors on public health and to rigorously evaluate public health interventions, policies, and programs.

International Education and Foreign Language Studies

\$151.4 million

Within the \$151.4 million requested, COSSA urges Congress to appropriate \$134.3 million to Title VI and \$17.1 million to Fulbright-Hays. These programs nurture cadres of college graduates with the cultural and language proficiencies needed to serve in government, including at the Department of Defense, Department of State, and federal intelligence agencies.
